

Maxient Software

FY27OT d

Goal: Data Tracking and Software for identifying Students at Risk from the Context of Behavior and Conduct, Mental Health and Wellbeing, and Sexual Misconduct Support Services. Maxient is the most frequent software used by DOS Staff to organize and implement intervention strategies for over 4,000 unique student cases per year. Maxient Software is utilized through a multidisciplinary approach allowing for colleagues that serve on the CARE Team, contribute to academic honesty cases, hearing board members, UHPD, and Equal Opportunity Services to manage confidential student records and track patterns of behavior and/or intervention strategies used to support student success. DOS could not serve students in a meaningful way without software to assist in the management of the volume of cases we see each year.
